

MySQL Cheat Sheet

MySQL is a popular open-source relational database management system known for its ease of use and scalability. Sometimes, you will need a little help while working on a project. That's why we created this MySQL Cheat Sheet.

Instructions for installing MySQL are available at:
<https://dev.mysql.com>

CONNECTING TO A MYSQL SERVER

Connect to a MySQL server with a username and a password using the mysql command-line client. MySQL will prompt for the password:
`mysql -u [username] -p`

To connect to a **specific database** on a MySQL server using a username and a password:
`mysql -u [username] -p [database]`

To **export data** using the mysqldump tool:
`mysqldump -u [username] -p \`
`[database] > data_backup.sql`

To exit the client:
`quit` or `exit`

For a full list of commands:
`help`

CREATING AND DISPLAYING DATABASES

To create a database:
`CREATE DATABASE zoo;`

To list all the databases on the server:
`SHOW DATABASES;`

To use a specified database:
`USE zoo;`

To delete a specified database:
`DROP DATABASE zoo;`

To list all tables in the database:
`SHOW TABLES;`

To get information about a specified table:
`DESCRIBE animal;`
It outputs column names, data types, default values, and more about the table.

CREATING TABLES

To create a table:
`CREATE TABLE habitat (`
`id INT,`
`name VARCHAR(64)`
`);`

Use AUTO_INCREMENT to increment the ID automatically with each new record. An AUTO_INCREMENT column must be defined as a primary or unique key:
`CREATE TABLE habitat (`
`id INT PRIMARY KEY AUTO_INCREMENT,`
`name VARCHAR(64)`
`);`

To create a table with a foreign key:
`CREATE TABLE animal (`
`id INT PRIMARY KEY AUTO_INCREMENT,`
`name VARCHAR(64),`
`species VARCHAR(64),`
`age INT,`
`habitat_id INT,`
`FOREIGN KEY (habitat_id)`
`REFERENCES habitat(id)`
`);`

MODIFYING TABLES

Use the ALTER TABLE statement to modify the table structure.

To change a table name:
`ALTER TABLE animal RENAME pet;`

To add a column to the table:
`ALTER TABLE animal`
`ADD COLUMN name VARCHAR(64);`

To change a column name:
`ALTER TABLE animal`
`RENAME COLUMN id TO identifier;`

To change a column data type:
`ALTER TABLE animal`
`MODIFY COLUMN name VARCHAR(128);`

To delete a column:
`ALTER TABLE animal`
`DROP COLUMN name;`

To delete a table:
`DROP TABLE animal;`

QUERYING DATA

To select data from a table, use the SELECT command. An example of a single-table query:
`SELECT species, AVG(age) AS average_age`
`FROM animal`
`WHERE id != 3`
`GROUP BY species`
`HAVING AVG(age) > 3`
`ORDER BY AVG(age) DESC;`

An example of a multiple-table query:
`SELECT city.name, country.name`
`FROM city`
`[INNER | LEFT | RIGHT] JOIN country`
`ON city.country_id = country.id;`

Use +, -, *, / to do some basic math.
To get the number of seconds in a week:
`SELECT 60 * 60 * 24 * 7; -- result: 604800`

AGGREGATION AND GROUPING

- **AVG**(expr) – average value of expr for the group.
- **COUNT**(expr) – count of expr values within the group.
- **MAX**(expr) – maximum value of expr values within the group.
- **MIN**(expr) – minimum value of expr values within the group.
- **SUM**(expr) – sum of expr values within the group.

To count the rows in the table:
`SELECT COUNT(*)`
`FROM animal;`

To count the non-NULL values in a column:
`SELECT COUNT(name)`
`FROM animal;`

To count unique values in a column:
`SELECT COUNT(DISTINCT name)`
`FROM animal;`

GROUP BY

To count the animals by species:
`SELECT species, COUNT(id)`
`FROM animal`
`GROUP BY species;`

To get the average, minimum, and maximum ages by habitat:
`SELECT habitat_id, AVG(age),`
`MIN(age), MAX(age)`
`FROM animal`
`GROUP BY habitat_id;`

INSERTING DATA

To insert data into a table, use the INSERT command:
`INSERT INTO habitat VALUES`
`(1, 'River'),`
`(2, 'Forest');`

You may specify the columns in which the data is added. The remaining columns are filled with default values or NULLs.
`INSERT INTO habitat (name) VALUES`
`('Savanna');`

UPDATING DATA

To update the data in a table, use the UPDATE command:
`UPDATE animal`
`SET`
`species = 'Duck',`
`name = 'Quack'`
`WHERE id = 2;`

DELETING DATA

To delete data from a table, use the DELETE command:
`DELETE FROM animal`
`WHERE id = 1;`

This deletes all rows satisfying the WHERE condition.
To delete all data from a table, use the TRUNCATE TABLE statement:
`TRUNCATE TABLE animal;`

CASTING

From time to time, you need to change the type of a value. Use the CAST() function to do this.
In MySQL, you can cast to these data types:
CHAR NCHAR BINARY DATE DATETIME
DECIMAL DOUBLE FLOAT REAL SIGNED
UNSIGNED TIME YEAR JSON spatial_type

To get a number as a signed integer:
`SELECT CAST(1234.567 AS signed);`
`-- result: 1235`

To change a column type to double:
`SELECT CAST(column AS double);`

MySQL Cheat Sheet

TEXT FUNCTIONS

FILTERING THE OUTPUT

To fetch the city names that are not Berlin:

```
SELECT name
FROM city
WHERE name != 'Berlin';
```

TEXT OPERATORS

To fetch the city names that start with a 'P' or end with an 's':

```
SELECT name
FROM city
WHERE name LIKE 'P%' OR name LIKE '%s';
```

To fetch the city names that start with any letter followed by 'ublin' (like Dublin in Ireland or Lublin in Poland):

```
SELECT name
FROM city
WHERE name LIKE '_ublin';
```

CONCATENATION

Use the CONCAT () function to concatenate two strings:

```
SELECT CONCAT('Hi ', 'there!');
-- result: Hi there!
```

If any of the string is NULL, the result is NULL:

```
SELECT CONCAT(Great ' ', 'day', NULL);
-- result: NULL
```

MySQL allows specifying a separating character (separator) using the CONCAT_WS () function. The separator is placed between the concatenated values:

```
SELECT CONCAT_WS(' ', 1, 'Olivier',
'Norris'); -- result: 1 Olivier Norris
```

OTHER USEFUL TEXT FUNCTIONS

To get the count of characters in a string:

```
SELECT LENGTH('LearnSQL.com');
-- result: 12
```

To convert all letters to lowercase:

```
SELECT LOWER('LEARNSQL.COM');
-- result: learnsql.com
```

To convert all letters to uppercase:

```
SELECT UPPER('LearnSQL.com');
-- result: LEARNSQL.COM
```

To get just a part of a string:

```
SELECT SUBSTRING('LearnSQL.com', 9);
-- result: .com
SELECT SUBSTRING('LearnSQL.com', 1, 5);
-- result: Learn
```

To replace a part of a string:

```
SELECT REPLACE('LearnSQL.com', 'SQL',
'Python');
-- result: LearnPython.com
```

NUMERIC FUNCTIONS

To get the remainder of a division:

```
SELECT MOD(13, 2); -- result: 1
```

To round a number to its nearest integer:

```
SELECT ROUND(1234.56789); -- result: 1235
```

To round a number to three decimal places:

```
SELECT ROUND(1234.56789, 3);
-- result: 1234.568
```

To round a number up:

```
SELECT CEIL(13.1); -- result: 14
SELECT CEIL(-13.9); -- result: -13
```

The CEIL (x) function returns the smallest integer not less than x. To round the number down:

```
SELECT FLOOR(13.8); -- result: 13
SELECT FLOOR(-13.2); -- result: -14
```

The FLOOR (x) function returns the greatest integer not greater than x. To round towards 0 irrespective of the sign of a number:

```
SELECT TRUNCATE(13.56, 0); -- result: 13
SELECT TRUNCATE(-13.56, 1); -- result: -13.5
```

To get the absolute value of a number:

```
SELECT ABS(-12); -- result: 12
```

To get the square root of a number:

```
SELECT SQRT(9); -- result: 3
```

USEFUL NULL FUNCTIONS

To fetch the names of the cities whose rating values are not missing:

```
SELECT name
FROM city
WHERE rating IS NOT NULL;
```

COALESCE(x, y, ...)

To replace NULL in a query with something meaningful:

```
SELECT domain,
COALESCE(domain, 'domain missing')
FROM contacts;
```

The COALESCE () function takes any number of arguments and returns the value of the first argument that is not NULL.

NULLIF(x, y)

To save yourself from division by 0 errors:

```
SELECT last_month, this_month,
this_month * 100.0
/ NULLIF(last_month, 0)
AS better_by_percent
FROM video_views;
```

The NULLIF (x, y) function returns NULL if x equals y, else it returns the value of x value.

DATE AND TIME

There are 5 main time-related types in MySQL:

DATE TIME DATETIME TIMESTAMP YEAR

DATE – stores the year, month, and day in the YYYY-MM-DD format.

TIME – stores the hours, minutes, and seconds in the HH:MM:SS format.

DATETIME – stores the date and time in the YYYY-MM-DD HH:MM:SS format. The supported range is '1000-01-01 00:00:00' to '9999-12-31 23:59:59'.

TIMESTAMP – stores the date and time. The range is '1970-01-01 00:00:01' UTC to '2038-01-19 03:14:07' UTC. MySQL converts TIMESTAMP values from the current time zone to UTC for storage, and back from UTC to the current time zone for retrieval.

YEAR – stores the year in the YYYY format.

INTERVALS

An interval is the duration between two points in time.

To define an interval: **INTERVAL 1 DAY**

This syntax consists of the INTERVAL keyword, a value, and a time part keyword (YEAR, QUARTER, MONTH, WEEK, DAY, HOUR, MINUTE, SECOND, MICROSECOND).

You may combine different INTERVALs using the + or – operator:

INTERVAL 1 YEAR + INTERVAL 3 MONTH

You may also use the standard SQL syntax:

INTERVAL '1-3' YEAR_MONTH

-- 1 year and 3 months

INTERVAL '3-12' HOUR_MINUTE

-- 3 hours 12 minutes

WHAT TIME IS IT?

To answer this question, use:

- CURRENT_TIME or CURTIME – to get the current time.
- CURRENT_DATE or CURDATE – to get the current date.
- NOW () or CURRENT_TIMESTAMP – to get the current timestamp with both of the above.

CREATING VALUES

To create a date, time, or datetime, write the value as a string and cast it to the proper type.

```
SELECT CAST('2021-12-31' AS date),
CAST('15:31' AS time),
CAST('2021-12-31 23:59:29' AS datetime);
```

You may skip casting in simple conditions; the database knows what you mean.

```
SELECT airline, flight_no, departure_time
FROM airport_schedule
WHERE departure_time < '12:00';
```

EXTRACTING PARTS OF DATES

To extract a part of a date, use the functions YEAR, MONTH, WEEK, DAY, HOUR, and so on.

```
SELECT YEAR(CAST('2021-12-31' AS date));
-- result: 2021
SELECT MONTH(CAST('2021-12-31' AS date));
-- result: 12
SELECT DAY(CAST('2021-12-31' AS date));
-- result: 31
```

DATE ARITHMETICS

To add or subtract an interval from a DATE, use the ADDDATE () function:

```
ADDDATE('2021-10-31', INTERVAL 2 MONTH);
-- result: '2021-12-31'
ADDDATE('2014-04-05', INTERVAL -3 DAY);
-- result: '2014-04-02'
```

To add or subtract an interval from a TIMESTAMP or DATETIME, use the TIMESTAMPPADD () function:

```
TIMESTAMPPADD(MONTH, 2,
'2014-06-10 07:55:00');
-- result: '2014-08-10 07:55:00'
TIMESTAMPPADD(MONTH, -2,
'2014-06-10 07:55:00');
-- result: '2014-04-10 07:55:00'
```

To add or subtract TIME from a DATETIME, use the ADDTIME () function:

```
ADDTIME('2018-02-12 10:20:24', '12:43:02');
-- result: '2018-02-12 23:03:26'
ADDTIME('2018-02-12 10:20:24', '-12:43:02');
-- result: '2018-02-11 21:37:22'
```

To find the difference between two dates, use the DATEDIFF () function:

```
DATEDIFF('2015-01-01', '2014-01-02');
-- result: 364
```

To find the difference between two times, use the TIMEDIFF () function:

```
SELECT TIMEDIFF('09:30:00', '07:55:00');
-- result: '01:35:00'
```

To find the difference between two datetimes (in a given unit of time), use the TIMESTAMPDIFF () function. Here's an example with the difference given in weeks:

```
SELECT TIMESTAMPDIFF(
WEEK, '2018-02-26', '2018-03-21'
); -- result: 3
```
